

UNDERSTANDING THE TECHNOLOGY

Ostopaix's Patent Pending system utilizes Mechanical Vibration Inhibition (MVI)

An unstabilized stoma allows the mucosal tissue to vibrate when passing gas which creates audible flatulence, just like a woodwind instrument

Ostopaix's Patent Pending System applies MVI to the Stoma preventing vibrations thereby eliminating the "Reed Effect"

OSTOPAIX COMPLETE KIT

Comes with 3 sets of discs and our very popular ultra-soft 4-way stretch bands.

THE OSTOPAIX SYSTEM

Reusable soft foam discs comfortably contour your stoma through your bag

Ultra-soft 4-way stretch bands provide the perfect pressure to prevent stoma sounds while increasing security and comfort

Completely discreet and secure while invisible under most clothes.
